INDEPENDENT COMMUNITY REPORT

Who reads your license plate?

Sun Prairie police use plate reader cameras. The city plans to switch from Flock to Axon. Here is what is known and what is still open.

Four facts

9
cameras today: 6 city-owned, 3 donated by Woodman's

30 days
how long plate data is kept now

May 2027
planned start of Axon

$235,389
draft, non-binding Axon estimate, 10 years

What the department says (in a FAQ, not a contract)

- The city owns the plate data.
- No federal access, and no sharing with agencies in the 287(g) program.
- Every search is logged with an offense category and a reason.

These are promises, not contract terms. The Oct. 7 meeting was a report, and no vote has been scheduled.

Three questions to ask

- How long will Axon keep the data, and who can change that number?
- Will those promises be written into the contract, and will the contract be published?
- Will livestreaming or Fusus be turned on, and what approval would adding cameras need?
